Introduction

Our Comments

This three-bedroom semi-detached home is presented in excellent condition throughout, having been thoughtfully renovated to a high standard. A particular highlight is the stunning self-contained one-bedroom annex, created from a garage conversion. The annex features a newly fitted kitchen and bathroom, with direct access to the generous rear garden, making it ideal for multi-generational living, guests or potential rental income.

The rear garden is undoubtedly one of the standout features of this rarely available property. Laid mainly to lawn with attractive shrub borders, this impressive outdoor space provides an excellent setting for family life, entertaining and outdoor enjoyment.

The internal accommodation comprises a front-aspect living room, a spacious entrance hall, which has been enlarged through a front extension, a downstairs cloakroom, a separate dining room, and a kitchen overlooking the rear garden. A separate utility room completes the ground floor accommodation.

To the first floor are three well-proportioned bedrooms and a beautifully refitted family bathroom.

Further benefits include driveway parking for up to three vehicles. The property is also conveniently located within easy reach of highly regarded schools, local shops and other everyday amenities.

Coal Mining

This map displays nearby coal mine entrances and their classifications.

Mine Entry

- ✗ Adit
- ✗ Gutter Pit
- ✗ Shaft

The Coal Authority has records of over 175,000 mine entries within the UK captured in the National Coal Mining database, derived from sources including abandonment plans, geological and topographical plans.

Coal mining activity is recorded as far back as the 13th century, but prior to 1872 there was no requirement to deposit abandonment plans. It is therefore believed there may be many unrecorded mine entries of which the Authority has no information or knowledge. These entries do not, therefore, appear within the Authority's national dataset as shown on this map.

Noise levels are modelled on a 10m grid at a receptor height of 4m above ground, polygons are then produced by merging neighbouring cells within the following noise classes:
