Who's my electricity network operator?

Your electricity network operator maintains the wires that bring electricity to your home or business. They're different from your energy supplier.

Wayleaves (customers/wayleaves)

Commitment to public safety (customers/public-safety-commitment)

Electricity network operators help connect your home to electricity and can move your electricity meter. They also fix power cuts that aren't caused by a problem inside your home. They are different from your **energy supplier**, which is the company you pay to use electricity.

Electricity network operator information is provided in good faith by ENA and should not be used or relied upon for decision making or commercial purposes.

Map of the UK and Ireland's electricity network operators

An **electricity transmission operator** moves electricity over long distances using power lines from power stations to different parts of the country. An **electricity distribution network operator** takes that electricity and delivers it to homes and businesses using smaller power lines and cables.

Think of it like this: **transmission networks** are like motorways, moving lots of electricity quickly over long distances. **Distribution networks** are like smaller roads, bringing electricity to your street and home.

Select the network type and then your region to see who manages the wires in your area.

Select their logo to visit the operator's website.
